

HOW TO USE YOUR PARTS AND ACCESSORIES GUIDE

Part and Packaging Information

Packaging and Unit Pricing

There are three different units of packaging for parts and accessories, they are:

1. Individually — Items that do not indicate any package quantity are priced and sold individually.
2. Priced individually, sold in specified quantity — When part numbers show the "@" sign, order the quantity you require. Orders will be rounded up to the next quantity.
3. Priced and packaged in quantities of a specified number — The items are sold in a specified case or package quantity. The quantities ordered should reflect the number of cases or packages you would like to purchase.

Mercury Precision, SmartCraft and Quicksilver Part and Accessories Limited Warranty

What is Covered

Brunswick Marine in EMEA warrants each new or factory rebuilt Mercury Precision, SmartCraft, Quicksilver parts and accessories, and Mercury Racing Propellers sold by a Mercury authorized dealer or distributor, to be free from defects in material and workmanship during the period described following.

Duration of Coverage

This limited warranty provides coverage for one year from either the date on which the product is first sold to a retail customer by a Mercury authorized dealer or distributor, or the date on which the product is first put into service, whichever occurs first.

Parts and accessories installed on Mercury Racing products that have product warranty duration of less than one year, carries a limited warranty coverage for a period of time equal to, and not greater than, the duration of the limited warranty originally provided with the parent product. The repair or replacement of parts, or the performance of service under this warranty, does not extend the life of this warranty beyond its original expiration date. Unexpired warranty coverage can be transferred to a subsequent purchaser upon proper re-registration of the product.

Conditions That Must be Met in Order to Obtain Warranty Coverage

Warranty coverage is available only to retail customers that purchase from a dealer authorized by Brunswick Marine in EMEA to distribute the product in the country in which the sale occurred. Routine maintenance outlined in the Operation and Maintenance Manual must be timely performed in order to maintain warranty coverage. Brunswick Marine in EMEA reserves the right to make warranty coverage contingent upon proof of proper maintenance.

What Mercury Will Do

Mercury's sole and exclusive obligation under this warranty is limited to, at our option, repairing a defective part, replacing such part or parts with new or refunding the purchase price of the Mercury product. Mercury reserves the right to improve or modify products from time to time without assuming an obligation to modify products previously manufactured.

How to Obtain Warranty Coverage

The customer must provide Mercury with a reasonable opportunity to repair, and reasonable access to the product for warranty service. Warranty claims shall be made by delivering the product for inspection to a Mercury dealer authorized to service the product. If the purchaser cannot deliver the product to an authorized dealer, written notice must be given to Brunswick Marine in EMEA. We will then arrange for the inspection and any covered repair. The purchaser shall pay for all related transportation charges and travel time. If the service provided is not covered by this warranty, the purchaser shall pay for all related labor, material, and any other expenses associated with that service. The purchaser shall not, unless requested by Mercury, ship the product or parts of the product directly to Brunswick Marine in EMEA. The original purchase receipt establishes the warranty period and must be presented to the dealer at the time warranty service is requested in order to obtain coverage.

What is Not Covered

This limited warranty does not cover routine maintenance items, tune ups, adjustments, normal wear, damage caused by abuse, abnormal use, double lab finished propellers, use of a propeller or gear ratio that does not allow the engine to run in its recommended wide open throttle RPM range (refer to the Operation and Maintenance Manual), operation of the product in a manner inconsistent with the recommended operation/duty cycle section of the Operation and Maintenance Manual, exceeding the horsepower limitations for the product as listed on the Mercury Racing propeller or in the Quicksilver Precision/Mercury Racing Accessory Guide, neglect, accident, submersion, improper installation (proper installation specifications are explained in the installation instructions for the product), improper service, use of an accessory or part not manufactured or sold by Brunswick Marine in EMEA, jet pump impellers and liners, operation with fuels, oils or lubricants which are not suitable for use with the product (refer to the Operation and Maintenance Manual), alteration or removal of parts, water entering the engine through the fuel intake, air intake or exhaust system, or damage to the product from insufficient cooling water caused by blockage of the cooling system by a foreign body, running the engine out of water, mounting the engine too high on the transom, or running the boat with the engine trimmed out too far. Use of the product for racing or other competitive activity, or operating with a racing type lower unit, at any point, even by a prior owner of the product voids the warranty.

Mercury Precision, SmartCraft and Quicksilver Parts and Accessories that are used for any purpose for which they are not intended (outside anticipated marine applications) are excluded from coverage under this warranty statement. Expenses related to haul-out, launch, towing, storage, telephone, rental, inconvenience, slip fees, insurance coverage, loan payments, loss of time, loss of income, or any other type of incidental or consequential damages are not covered by this warranty. Also, expenses associated with the removal and/or replacement of boat partitions or material caused by boat design for access to the product are not covered by this warranty.

No individual or entity, including Brunswick Marine in EMEA authorized dealers, has been given authority by Brunswick Marine in EMEA to make any affirmation, representation or warranty regarding the product, other than those contained in this limited warranty, and if made, shall not be enforceable against Brunswick Marine in EMEA. For additional information regarding events and circumstances covered by this warranty, and those that are not, see the Warranty Coverage section of the Operation and Maintenance Manual, incorporated by reference into this warranty.

DTS RIGGING

SMARTCRAFT AND DTS APPLICATION INFORMATION

Mercury Marine strongly recommends that boat builders and dealers use only Mercury Marine brand SmartCraft and DTS accessories. The throttle and shift functions on a boat are safety critical components. Mercury Marine validated the design and manufacture of the various SmartCraft and DTS accessories sold by Mercury Marine through an extensive product qualification testing protocol. Each of the Mercury Marine accessories for these systems has pass through that qualification process. It is not possible for Mercury Marine to test its systems with all of the accessories manufactured and sold by other entities. As a result, if a boat builder or dealer chooses to disregard the recommendation that only Mercury Marine accessories be used, the boat builder or dealer should adhere to specifications provided by Mercury Marine for all non-Mercury Marine components which interface with the Mercury Marine SmartCraft and/or DTS System. Documentation exhibiting compliance with these specifications should be submitted and approved by Mercury Marine prior to the finished product being released for sale. The Mercury Marine Limited Warranty does not provide coverage for damage caused by the use of accessories or parts not manufactured or sold by Mercury Marine.

ACTIVE TRIM

Active Trim

Active Trim is an integrated GPS, speed-based automatic engine trim system from Mercury Marine. This intuitive, hands-free system continually adjusts engine trim based on changes in boat speed to improve performance, fuel economy, and ease of operation. It responds to boat maneuvers with precision and delivers a better overall driving experience. No knowledge of trimming an engine is needed to take advantage of Active Trim.

- As the boat accelerates, the engine will trim out
- As the boat decelerates, e.g. making a turn, the engine will trim in
- Active Trim can be overridden at any time by using the manual trim buttons
- Active Trim allows the boat operator to compensate for changes in boat load, driver preferences, and weather conditions while maintaining full automatic control

Active Trim is compatible with:

- Mercury FourStroke outboards from 40 to 400 HP
- Mercury SmartCraft-capable two-stroke outboards
- Mercury SmartCraft-capable gas and diesel sterndrive engines with digital trim senders

BATTERY ISOLATORS

Multi-battery drain occurs when there are two or more batteries in a charging system. Without a battery isolator, accessories attached to one battery will draw power from all other batteries in the circuit, leaving them seriously rundown, or even dead. The Quicksilver Battery Isolator is an electric current controlling device which isolates each battery in the circuit. Each battery then discharges and charges accordingly. Never does the load on one battery drain power from other batteries in the system.

Battery isolated system that allows you to run your kicker engine and use the Power Steering system without your primary engine running. This system allows you to connect to a deep cell battery (not your starter battery) and the system will provide normal power steering from the wheel. The system will alert you when your auxiliary battery is below 9.5 volts. This signal means that you must start your primary engine to change the battery system. This kit will save the starting battery for primary starting use only.

MEASURING OUTBOARD THROTTLE/SHIFT CABLES

Boats with side mount controls.

1. Add boat measurements A-B in inches (mm) and add 18 in. (457 mm) to the total. Dimension B represents the distance from the remote control location measured along the gunwale to the transom.
2. In dual engine installations, dimension A is measured from the gunwale to each engine center-line.
3. Divide by 12 in. (304 mm).
4. This is the length of the throttle and shift cables in feet (meters).
5. For left hand (Port) remote control installation, use the same measuring procedure following routing along the opposite side of the boat.

MEASURING MERCUISER THROTTLE/SHIFT CABLES

Boats with side mount controls.

1. Add A-B-C in inches (mm). Dimension B represents the distance from the remote control location measured along the gunwale to the transom. The C dimension represents distance from the transom, forward to the throttle/shift attaching point.
2. In dual engine installations, dimension A is measured from gunwale to each engine center-line.
3. Divide by 12 in. (304 mm).
4. This is the length of the throttle and shift cables in feet (meters).
5. For left hand (Port) remote control installation, use the same measuring procedure following routing along the opposite side of the boat.

INSTALLATION SPECIFICATIONS AND TOOLS

MEASURING CONSOLE CONTROL THROTTLE/SHIFT CABLES

Boats with either Outboard or MerCruiser applications.

1. When measuring cable length for a console mount remote control, measure along the actual selected cable routing path and add 18 inches (457 mm) to the total.
2. Divide by 12 inches (304 mm).
3. This is the length of the throttle or shift cables in feet (meters).

DUAL REMOTE OIL TANK SCHEMATIC

Two standard Mercury 3 US gal (11 L) oil tanks may be series connected as shown. The hose from tank no. 2 to tank no. 1 must not exceed 8 ft.(2.44 meters). All precautions and rules for the filling & bleeding of a single tank apply to this two-tank arrangement. No remote tank should be installed higher than the outboard pressure relief valve. Dissimilar oil levels in the tanks at start up will self adjust during running to maintain oil in primary tank #1. Oil need only be present in tank #1 to work.

PROPELLER SELECTOR

HOW-TO-FIND THE RIGHT PROPELLER

- Find the make, model, year and horsepower of the engine you are propping.
- For a Mercury or MerCruiser engine, turn to the Mercury propeller application charts in this guide and locate the table that contains propellers designed for the engine you are propping.
- Propellers for older Mercury motors can be found in the Historical Propeller charts section of the guide.
- For a non-Mercury outboard or stern drive engine, please reference the Quicksilver section of the propeller guide. Quicksilver propellers are designed to fit a wide variety of competitive applications.
- Many Quicksilver propellers require a hub kit (sold separately) to complete the installation. You can find a Quicksilver 2 step reference guide at the beginning of the propeller guide. This guide will assist you in locating the proper hub kit for your engine.

PITCH & DIAMETER

- Each propeller in this guide has a listed diameter and pitch. The diameter is the first number listed, followed by the pitch. For a 14 X 19 Propeller, this means that the propeller has a diameter of 14 inches and has 19 inches of pitch.

- Typically when selecting a propeller, you only need to select the right pitch for your boat. The correct diameter for that propeller has usually been predetermined by our engineering staff for most propellers. In general, high horsepower applications require more diameter. Propeller diameter typically decreases as pitch increases within a given propeller line.

- The diameter of the propeller is defined as the distance across the imaginary circle that is made as the propeller rotates.
- The pitch of a propeller is the theoretical distance in inches that a propeller would move forward in one revolution. The higher the pitch an engine can turn, the faster the boat will go.

DETERMINING THE CORRECT PITCH

- Consult the owner's manual to find the recommended full throttle (W.O.T.) RPM range for your engine.
- Run the boat with moderate load in an open stretch of water at W.O.T trimming the engine up for speed. Record the maximum RPM during the run. Repeat the run in the opposite direction to compensate for wind and current. The average of these two numbers is your W.O.T. RPM.
- The best compromise of acceleration, top speed and fuel economy can be obtained when the W.O.T. RPM is in the middle of the manufacturers suggested RPM range.
- An over propped boat will cause the engine to lug, with the engine unable to reach the suggested W.O.T. RPM range. An over propped boat may also exhibit sluggish acceleration and poor hole shot.
- An under propped boat will over-rev, exceeding the manufacturers recommended W.O.T. RPM range.
- If the current propeller isn't in the manufacturers suggested RPM range, select a replacement propeller based on the following guidelines:
 - Adding one inch of pitch will reduce W.O.T RPM by 150-200 RPM
 - Subtracting one inch of pitch will increase W.O.T RPM by 150-200 RPM

CAUTION

Operating the engine outside of the recommended RPM range can cause severe damage to your engine and may void the warranty. Always test the boat on the water after you install a new propeller.

STEP 1 - SELECT HARDWARE

Step 1: Select Hardware

Locate the model, year and horsepower of your outboard or sterndrive to find your hub kit.
Match the 'options' color to a like-colored propeller choice in step 2.

STEP 2 - SELECT PROPELLER

PROPELLER MATERIAL AND BLADE FACTS

METAL OPTIONS

- Mercury makes propellers out of aluminum and stainless steel.

- Aluminum propellers are inexpensive and suitable for general purpose boating. Mercury uses Mercalloy aluminum that provides superior strength and thinner blades for top performance.

- Stainless steel is favored by boaters who are more conscious about performance and durability. Stainless propellers offer substantially better hole shot and top speed in comparison to an aluminum propeller. In terms of durability, stainless steel props will withstand impacts that would destroy an aluminum propeller. Over the long run, one stainless propeller will last as long as multiple aluminum propellers

- Mercury's legendary X7 stainless steel alloy provides incredible strength that allows propeller designs that would be impossible with other alloys. X7 is featured on Mercury's Enertia and Fury line of propellers.

- Many boaters have questions about whether or not a stainless steel propeller can cause lower unit damage in the event of hitting an underwater obstruction. With Mercury's Flo-Torq II hub system, the hub is designed to sacrifice its drive sleeve well below the failure threshold of modern drive units. This assures protection for your drive no matter what kind of propeller material you run.

BLADE CONFIGURATIONS

- For most boats, a three blade propeller provides a good blend of smoothness, acceleration, handling and top speed.
- Four-plus blade propellers typically provide the following advantages vs. three blade propellers:
 - o Plane the boat faster
 - o Keep the boat on plane at lower speed
 - o Less likely to ventilate in sharp turns
 - o Better holding power in rough conditions
- In high-performance applications at high drive heights, a four blade propeller may be a better all around choice than a three blade, simply because you are getting more blade area in the water for better control, handling and bow lift.
- Five blade propellers (like Mercury's HighFive propeller) provide superior rough water holding and strong acceleration for tow sports. However the HighFive does not reach the same top speeds as other three and four blade props in our line-up.

SPARE PROPELLERS

- It's always a good idea to keep a spare prop aboard for safety. One way to get the most use out of your spare is to buy a spare that is 2 inches lower in pitch than your regular prop, and use this prop as a water sports propeller. The improved tow sports performance will have a significant impact on your acceleration while pulling a tube, skier or wakeboarder. Remember to change back to your regular prop when it is time for normal usage.

If you still have questions about what propeller is right for you, consult your local Mercury dealer.

FLO-TORQ HUB SYSTEM SELECTOR

Selecting the Flo-Torq Hub System that is Right for You

Mercury Propellers has a complete lineup of Flo-Torq hub options to provide the best boating experience for you. Please read the below information regarding the various Flo-Torq options available.

- **Flo-Torq II – Often imitated, never replicated**
 - The Flo-Torq II is the world’s first modular hub system for outboards and sterndrives
 - The Flo-Torq II is field serviceable. Loosen the propeller nut, pull off the propeller and replace the drive sleeve. No need to miss time on the water waiting for rubber hub replacement work

- **Flo-Torq Reflex – 75% Stronger than traditional rubber hubs**
 - The Flo-Torq Reflex’s innovative design relies on the flexible Reflex fingers - constructed of Noryl GTX. The fingers are designed to flex up to eight degrees, quieting rattle and vibration
 - The Flo-Torq Reflex is field serviceable
 - The Flo-Torq Reflex comes standard with all aluminum and stainless propellers within the 25-30 hp CT and 40-60 hp outboard applications

- **Flo-Torq III and Flo-Torq IV – Rattle and vibration absorption in one**
 - The Flo-Torq III and IV have a 2 piece engineered polymer sleeve
 - The 2 pieces are coupled by titanium springs that allow the hub system flex, thus absorbing the root cause of clutch rattle when using a stainless steel propeller
 - The Flo-Torq III and IV are not required for use with aluminum propellers
 - Refer to the quick reference chart below to understand applications where the Flo-Torq III and IV may be beneficial to you

ENERTIA

Enertia, a revolutionary product that will measurably improve acceleration and top speed on many deep vee boats powered by high-horsepower outboards. Enertia has also been proven to increase the overall performance of runabouts and pontoons.

The Enertia is the first propeller to utilize the added strength and durability of the new X7 alloy. This patented new alloy allowed Mercury's Propeller Engineers to develop a propeller design that far surpasses the limits of conventional stainless steel. The X7 alloy is 30% stronger and 4 times more durable than conventional stainless steel.

Typical benefits of this new design include:

- Better Acceleration and top end speed.
- Thin blades and higher rake angles for increased efficiency.
- Stays hooked up; fewer blow outs while cornering
- Keeps boats on plane at slower speeds

The 11-15P Enertia is the perfect match for 90/115 hp CT and 150+ hp pontoon and tritoon applications
Enertia is available in one inch pitch increments to dial in the ultimate performance of todays high horsepower outboards.

Equiped with Flo-Torq II Hub Kit 835257K 1

Equipped with PVS - Performance Vent System solid fittings.

MERCURY PROPELLER TYPE

FURY

Fury, a revolutionary product that will measurably improve acceleration and top speed on many bass boats powered by 200+ horsepower outboards.

The Fury is Mercury's first bass boat propeller to utilize the added strength and durability of the new X7 alloy. This revolutionary new alloy allowed Mercury's Propeller Engineers to develop a propeller design that far surpasses the limits of conventional stainless steel. The X7 alloy is 30% stronger and 4 times more durable than conventional stainless steel.

Fury is available in 24, 25, 26 and 27 pitch to dial in the ultimate performance of today's high horsepower bass boats. Drop 1 inch of pitch if running with extreme weight added to the boat that results in a reduction of RPM/Speed.

Equipped with Flo-Torq II Hub Kit 835257K 6
PVS Enabled - Comes standard with plugs removed for best performance

FURY 4

The wait is over, the Fury 4 is here. The Fury 4 is a new propeller designed to be the quickest accelerating and fastest running propeller on heavily weighted bass boats for both the tournament angler as well as the every day fisherman using 200+ horsepower outboards.

In addition to utilizing the added strength and durability of the Mercury's proprietary X7 alloy, the Fury 4 contains 8 PVS holes (2 per blade) to allow optimal holeshot customization.

Fury 4 is available in 24, 25, and 26 pitch to dial in the ultimate performance of today's high horsepower bass boats. The same pitch is recommended if the current Tempest Plus or Fury allows the boat to operate in the desired RPM range.

FCW® 25W50 SYNTHETIC BLEND MARINE OIL

25W50 oil is often recommended for engines used in racing. This high performance oil provides maximum lubrication for your marine engine. This oil:

- Maintains viscosity under the most extreme operating conditions such as
 - Racing: Operating engine at maximum output and high temperatures
 - Tow sports and fishing: Alternating between periods of high RPM's and throttling down to low RPM's or idle
- Protects against varnish buildup and sludge formation
- Exceeds the rust protection requirements for NMMA certification

Recommended for use in Verado® outboards and other high-performance marine engines

Exceeds manufacturers' warranty requirements and recommendations for use of an FCW® 25W50 oil

MERCURY HIGH PERFORMANCE 4-STROKE OIL

Maximum protection is essential when pushing your engine to the limit. Racing, tow sports and fishing applications require your engine to operate under extreme conditions. Operating at high engine output and high temperatures or alternating between periods of high RPMs and throttling down to low RPMs or idle puts serious pressure on engine oil. Mercury Racing Four Stroke oil will not break down under these conditions. It maintains its viscosity, protects against varnish buildup and sludge formation and exceeds the rust protection requirements for NMMA® certification.

Recommended for use in all Mercury Racing four-stroke engines including: FormulaRace and Verado outboards and 525 EFI through 1650 sterndrives

Meets or exceeds manufacturers' warranty requirements for use of an FC-W® marine engine oil

MERCURY EXTREME PERFORMANCE GEAR LUBE

Mercury Racing Gear Lube was designed for outboard and sterndrive racing applications. This gear lube provides maximum protection against:

- Water intrusion – advanced emulsifiers protect gears if water enters the gear housing
- Wear – tackifiers and pressure additives improve oil film adhesion and protect against excessive wear
- Horsepower loss - prevents horsepower loss and won't break down when gears reach high temperatures

Recommended for use in Mercury Racing outboard gear cases including: Sport Master, Torque Master, Fleet Master, VI SSM and IV SSM and Mercury Racing sterndrive applications including Dry Sump Six,NXT6, SSM, NXT, Bravo XR, Bravo XR Sport Master drives and NXT transmission assemblies.

QUICKSILVER GREASES

Quicksilver Grease Product Line Simplified

Quicksilver greases have gone through a makeover. The product line has been simplified to eliminate confusion about which grease to use in what application. The line has been reduced from six types of grease to three. Below is a summary of the consolidation:

2-4-C Marine Grease – No change

Needle Bearing Assembly Grease – Now called Assembly Grease. The formula has not changed but the packaging has. Instead of 8 oz tubes, the product now comes in 1lb tubs.

Special 101 – Replaced by 2-4-C Marine Grease

U-Joint and Gimbal Bearing Lubricant – Replaced by Extreme Grease

Anti-Corrosion Grease - Replaced by Extreme Grease

Engine Coupler/Spline Grease - Replaced by Extreme Grease

RIGGING TUBE KIT

32-842756T01

Mercury Racing version, the cowl fitting bolts firmly into place. Because the 2-1/2 inch tubing threads into the one piece couplers instead of over them, greater clearance is achieved for outboard rigging hardware including throttle cables, electronics cables, steering lines, and fuel lines. The durable hose and one piece couplers provide a complete seal at both the engine and boat ends. Hose length is 5 feet.

Fits all production 3.0 liter V-6 EFI and OptiMax cowl as well as Racing 3.0 liter OptiMax cowl.
